WNS 20swg (1.0mm) FLANGE FOLDER is the ideal machine when forming regular sized flanges. Designed to create a right angle flange on pre-cut sheet, this machine provides quick and easy folding of material up to 1.0mm thickness. There is no need to keep measuring, nor clamping. The Flange Folder also has the advantage of being 'open ended' allowing the user to also form inside flanges. Ideal for use with Pittsburgh Lock Rollformers.
