 SS4 1ND
 ENGLAND

Heavily constructed machine with adjustable guides. In one operation corner of 102mm x 102mm x 3.0mm can be cut in mild steel. The fine adjustable lower blades guarantee a smooth cut. The blades are of special quality steel. The side guides are adjustable along scales and can be used for straight corners and angled corners. The down stroke is powered by hydraulic pump, the up stroke by a heavy spring. The motor is only running when down stroking for a minimum energy consumption.

Blades

The plate is immediately fixed and does not slide away.
 When the cutting line is marked on the plate, the exact positioning of the blade is clearly visible.
 For small corners only a small movement is necessary.

Options

Spare blades.

SPECIFICATIONS

Model	Capacity	Materials	Power	Length	Width	Height	Table Height	Weight
