- c/w Segmented Clamping Bars
- c/w Slotted Clamping Bar for Folding Shallow Boxes
- c/w Back Stops for Positioning the Workpiece
- 230v, Single Phase Electrics

JORG MAGNABEND MAGNETIC FOLDERS (JMF1250) are versatile and easy to use folding machines. Suitable for folding various types of sheet including aluminium, copper, steel, stainless steel and coated materials. Manufactured with an electromagnetic clamping system. A powerful electromagnet pulls on the upper beam, so that the sheet is clamped, as clamping takes place across the entire width, there is minimal deviation. As the upper bar is always a flat strip, closed tubes or high boxes can be folded. The clamping bar of the Magnabend can be easily removed and replaced for a different type, such as a narrow or segmented bar (please see photograph for reference). These machines are manufactured with 230v, single phase electrics.

Other Models Available:
